

| Workload                     | Total bases | Sim. run time<br>(S0, Luna, 50MB DB) | Status                             |
|------------------------------|-------------|--------------------------------------|------------------------------------|
| 10 reads                     | ~15K        | 111s                                 | MEASURED                           |
| 50 reads                     | 91K         | 188s                                 | MEASURED                           |
| 2,000 reads                  | 35.1M       | ~9.8 hrs                             | IN PROGRESS<br>(>11 hrs, not done) |
| 10,000 reads                 | 60.2M       | ~16.9 hrs                            | ESTIMATED<br>(not run)             |
| 104,832 reads<br>(full file) | 357.6M      | ~4.2 days                            | ESTIMATED<br>(not run)             |

Only 10/50-read rows are measured. 2,000-read is a live job still running past 11 hours (not yet complete). 10,000-read and the full file are extrapolated from the real fixed+variable cost model (fixed ~96s DB load + ~1.007ms/base), not actually run - treat as rough estimates, not measurements, until confirmed.
