

Workload	Total bases	Sim. run time (S0, Luna, 50MB DB)	Status
10 reads	~15K	111s	MEASURED
50 reads	91K	188s	MEASURED
2,000 reads	35.1M	12.42 hrs (44,716s)	MEASURED (S0, done)
10,000 reads	60.2M	~21.3 hrs	ESTIMATED (not run)
104,832 reads (full file)	357.6M	~5.3 days	ESTIMATED (not run)

10/50/2,000-read rows are measured (S0, no cache, Luna, 50MB DB). 10,000-read and the full file are extrapolated from a fixed+variable cost model refit on BOTH real points (50 reads and 2,000 reads): fixed ~71.8s DB load + ~1.272ms/base - not actually run, treat as rough estimates, not measurements, until confirmed.
